Why It Would Benefit Egypt

1. National-Level Proof (Official Surveys — Strongest Evidence)

- **Egypt Demographic and Health Survey (EDHS 2014)** — The gold standard national survey, with a dedicated anemia chapter for children 6–59 months:
  - **Full Report:** https://dhsprogram.com/pubs/pdf/fr302/fr302.pdf
  - **Key Number:** ~27% of under-5 children were anemic in 2014 — serving as the Vision 2030 baseline figure.
- **UNICEF Clearing House** — Confirms the Vision 2030 targets directly:
  "Egypt's vision 2030 aims to... reduce anemia rates from 27% in 2014 to 15% in 2030"
  - **Link:** https://clearinghouse.unicef.org/download-ch-media/c816e5c8-246a-4418-bc42-70bc49c2805c
- **UNFPA SDG Localization Document (Egypt Government)** — Table 5 sets per-governorate anemia targets for 2030, proving the government officially tracks this:
  - **Link:** https://egypt.unfpa.org/sites/default/files/pub-pdf/part_i_localization_targets_7_nov.pdf

2. Recent Proof the Problem is Getting Worse, Not Better

- **BMC Study (2024, Kafr El-Sheikh)** — Found 44% anemia prevalence in infants 6–23 months; cites UNICEF data showing under-5 anemia rose from 27.2% (2014) to 43% (2022):
  - **Link:** https://link.springer.com/article/10.1186/s43054-023-00239-x
- **Egyptian Family Health Survey (CAPMAS)** — Reported that ~43% of children aged 6 months to 6 years are anemic:
  - **Link:** https://www.degruyterbrill.com/document/doi/10.1515/ijamh-2025-0042/html

3. Upper Egypt / Regional Disparity Proof

- **"Anaemia among Egyptian Children between 2000 and 2005"** — Directly confirms that children under 24 months, those recently sick, and those living in Upper Egypt were significantly more likely to be anemic:
  - **Link:** https://pmc.ncbi.nlm.nih.gov/articles/PMC6860748/
- **Iron Deficiency Study (Al-Fayoum)** — Found that 64% of children had iron-deficiency anemia, highlighting that rural areas and low social class carry higher risk:
  - **Link:** https://pubmed.ncbi.nlm.nih.gov/25567692/
